

Order of initialization:

- Orange => Green => Grey

Entries of Green color tables should not be initialized without the corresponding Orange entries existing in its table.

- Same with entries for Grey and Green tables.

Entries of tables with same color rank can be initialized in any order

- With the exception of corresponding Role which should be created before User entries. (User shouldn't be created without a role)

Blue tables represent default value/enumerations that shouldn't, but can be modified.
